

## **I. AMENDMENT**

### **In the Claims:**

The following listing of claims will replace all prior versions and listings of the claims in the application:

### **Listing of the Claims:**

1. (Currently Amended) A method for producing a decellularized extracellular matrix material containing a biological material, wherein the method comprises:
  - (a) conditioning a body tissue of a donor animal in vivo to produce the biological material in an amount different than the amount of the biological material that the body tissue would produce absent the conditioning;
  - (b) allowing the conditioned body tissue to produce the biological material in vivo;
  - (c) harvesting the conditioned body tissue from the donor animal; and
  - (d) decellularizing the conditioned body tissue to obtain the extracellular matrix material containing the biological material,wherein the steps (a) and (b) are conducted before the harvesting in step (c) and wherein the body tissue is not conditioned by nutrient deficiency.
- 2-4. (Cancelled)
5. (Original) The method of claim 1 further comprising monitoring the amount of biological material produced by the conditioned body tissue.
6. (Original) The method of claim 1 further comprising delivering a therapeutic agent to the body tissue before the conditioning in step (a).
7. (Original) The method of claim 1 further comprising delivering a therapeutic agent to the body tissue after the conditioning in step (a).

8. (Original) The method of claim 1 further comprising adding a therapeutic agent to the decellularized extracellular matrix material.
9. (Original) The method of claim 1, wherein the donor animal is a mammal.
10. (Previously Presented) The method of claim 1, wherein the mammal is a cow, pig, horse, chicken, cat, dog, rat, monkey, or human.
11. (Previously Presented) The method of claim 1, wherein the body tissue is an epithelial tissue, connective tissue, muscle tissue, or nerve tissue.
12. (Previously Presented) The method of claim 1, wherein the body tissue is a lymph vessel, blood vessel, heart valve, myocardium, pericardium, pericardial sac, dura mater, meniscus, omentum, mesentery, conjunctiva, umbilical cord, bone marrow, bone piece, ligament, tendon, tooth implant, dermis, skin, muscle, nerve, spinal cord, pancreas, gut, intestine, peritoneum, submucosa, stomach, liver, or bladder.
13. (Previously Presented) The method of claim 1, wherein the biological material is vascular endothelial growth factor (VEGF), transforming growth factor (TGF), fibroblast growth factor (FGF), epidermal growth factor (EGF), cartilage growth factor (CGF), nerve growth factor (NGF), keratinocyte growth factor (KGF), skeletal growth factor (SGF), osteoblast-derived growth factor (BDGF), hepatocyte growth factor (HGF), insulin-like growth factor (IGF), cytokine growth factor (CGF), platelet-derived growth factor (PDGF), hypoxia inducible factor-1 (HIF-1), stem cell derived factor (SDF), stem cell factor (SCF), endothelial cell growth supplement (ECGS), granulocyte macrophage colony stimulating factor (GM-CSF), growth differentiation factor (GDF), integrin modulating factor (IMF), calmodulin (CaM), thymidine kinase (TK), tumor necrosis factor (TNF), growth hormone (GH), bone morphogenic protein (BMP), matrix metalloproteinase (MMP), tissue inhibitor of matrix metalloproteinase (TIMP),

interferon, interleukin, cytokine, integrin, collagen (all types), elastin, fibrillin, fibronectin, laminin, glycosaminoglycan, vitronectin, proteoglycan, transferrin, cytotactin, cell binding domain, tenascin, or lymphokine.

14. (Previously Presented) The method of claim 1, wherein the body tissue is conditioned by biological conditioning, chemical conditioning, pharmaceutical conditioning, physiological conditioning, or mechanical conditioning.

15. (Original) The method of claim 14, wherein the biological conditioning comprises transfecting the body tissue with a nucleic acid that encodes the biological material.

16. (Withdrawn) The method of claim 14, wherein the chemical conditioning comprises incubating the body tissue in a hypotonic or hypertonic solution.

17. (Withdrawn) The method of claim 14, wherein the pharmaceutical conditioning comprises delivering a therapeutic agent to the body tissue.

18. (Withdrawn) The method of claim 14, wherein the physiological conditioning comprises exposing the body tissue to heat shock or cryopreservation followed by thawing.

19. (Withdrawn) The method of claim 14, wherein the mechanical conditioning comprises applying a force to the body tissue.

20. (Withdrawn) The method of claim 19, wherein the force is a mechanical force, centrifugal force, electrical force, electromagnetic force, hydrostatic or hydrodynamic force, sound wave, or ultrasound wave.

21. (Withdrawn) A decellularized extracellular matrix material produced by the method of claim 1 for injection into a subject.

22. (Withdrawn) A decellularized extracellular matrix material produced by the method of claim 1 for implantation into a subject.

23. (Withdrawn) A tissue regeneration scaffold for implantation into a patient comprising the decellularized extracellular matrix material produced by the method of claim 1.

24. (Withdrawn) A method of using the decellularized extracellular matrix material produced by the method of claim 1 to repair injured body tissue of a patient.

25. (Withdrawn) A method of using the decellularized extracellular matrix material produced by the method of claim 1 to regenerate injured body tissue of a patient.

26. (Withdrawn) A method of using the decellularized extracellular matrix material produced by the method of claim 1 to strengthen injured body tissue of a patient.

27. (Currently Amended) A method for producing a decellularized extracellular matrix material containing a biological material, wherein the method comprises:

- (a) conditioning a body tissue of a donor animal in vivo to produce the biological material in an amount different than the amount of the biological material that the body tissue would produce absent the conditioning, wherein the conditioning comprises transfecting the body tissue with a nucleic acid that encodes the biological material;
- (b) allowing the conditioned body tissue to produce the biological material in vivo;
- (c) harvesting the conditioned body tissue to obtain the extracellular matrix material containing the biological material,

wherein the steps (a) and (b) are conducted before the harvesting in step (c).

28-29. (Canceled).

30. (Original) The method of claim 27, wherein the biological material is vascular endothelial growth factor (VEGF).

31. (Withdrawn) A method for producing a decellularized extracellular matrix material containing a biological material, wherein the method comprises:

- (a) conditioning a body tissue of a donor animal to produce the biological material in an amount different than the amount of the biological material that the body tissue would produce absent the conditioning, wherein the conditioning comprises applying a mechanical force to the body tissue;
- (b) allowing the conditioned body tissue to produce the biological material;
- (c) harvesting the conditioned body tissue from the donor animal; and
- (d) decellularizing the conditioned body tissue to obtain the extracellular matrix material containing the biological material.

32. (Withdrawn) The method of claim 31, wherein steps (a) and (b) are conducted before the harvesting in step (c).
